ABSTRACT

This essay reports on several major features of black academic libraries: collections, operating expenditures, staff, and salaries. Eighty-five black, four-year, degree-conferring institutions were queried, and fifty-one questionnaires were returned. The results are categorized in terms of type of support of the institutions. In the fifty-one institutions reporting their 1968 fall figures, 92,911 students were enrolled on a full time basis. These institutions reported a total of 4,290,915 volumes for the end of the year. No collection in a black college approaches one-million volumes. Eleven institutions (about one-fifth) exceed the 100,000 volume figure. During the year, 324,487 volumes were added. The total number of bound periodicals reported was 235,212. There was 46.1 volumes per full-time student, on the average, with 2.5 periodicals per capita. The highest per capita holdings were 142.7 volumes; 13.3 was the lowest. The highest figure reported for bound periodicals was 14.4 per capita with a low of 0.26. (MF)

BLACK ACADEMIC LIBRARIES: AN INVENTORY

by

Casper LeRoy Jordan
Assistant Professor
Atlanta University School of Library Service

Unless some social upheaval presently unforeseen occurs, the ten-year period of the sixties will be most vividly remembered in the United States by enduring and quick advances toward racial equality. The Federal Government enacted legislation guaranteeing certain basic civil rights and took steps to inaugurate political equality for all citizens regardless of color and race. Of equal importance, the conscience of America generally was aroused to the lasting evils of discrimination and its consequent violations of the moral principles basic to a truly democratic nation.

Now aware of the racial injustice which has so long existed throughout our republic, more and more individuals and organizations are throwing their efforts into a number of activities to close the gap between our professed egalitarian principles and our discriminatory practices. These activities assail abuses along the whole spectrum of rights -- from employment practices, housing conditions and consumer services to voting privileges and equal access to education. The fight for equal educational opportunities demonstrates how advances in any of these areas of social life affect the others. Formerly, major progress toward the goal of free and open access to education has had to wait on legal action in the courts, but now educational opportunities are expanding as the result of wider and more telling use of political power and social pressure. These educational opportunities are themselves necessary before comparable

advances can be made in employment opportunities; for in a modern society, education and technological training are the keys which unlock the doors to the preferred occupations. Fair employment practices will not, by themselves, guarantee admittance to higher occupations. Without open access to education at all levels, to the untutored and unskilled the right to employment without regard to race will largely remain an empty dream.

The salutary effects of increased educational opportunity extend beyond employment and housing and voting. Education also gives renewed strength to this movement for equal opportunities. Black college students dramatized this role of education in the 1960's when they began to demonstrate for equal consumer services -- first in North Carolina and then in Alabama and Georgia. Students joined in protests at lunch counters and movie theaters, bringing arrests, jailings, publicity and further demonstrations. These sit-in demonstrations and the enrollment of the first blacks in previously segregated state universities in Mississippi and Georgia, glued the eyes of the world on the colleges that these students attended and brought about great interest in the character of the education they provided. Questions were posed. What were these colleges like? What role did they play in the whole enterprise of American higher education? What were their standards? What were their needs?

In the past fifty years analysts of American higher education had undertaken to answer these questions. All of these reports in one way or another contain many facts about higher education for negroes. Although the black schools include less than ten per cent

of American institutions of higher education, and their enrollments comprise less than five per cent of all college students, these black colleges and universities enroll over half of all Negroes attending the nation's institutions of higher education. Regardless of the speed or extent of racial integration, and in spite of the Riesman-Jencks satire, many of these institutions will continue to be a major avenue to higher education for black youth.

The fact has been established that except at the topmost level of excellence represented by a few celebrated institutions, the Negro institutions run the entire gamut of quality within American higher education.¹ Negro institutions lie all along the line of the American academic procession, instead of forming a separate unitary group at the tail end. Some are exceptionally far forward and others far behind, but beside each of them stands some institution attended predominantly by white students. An objective view of the line must disclose that a not inconsiderable number of these black institutions now struggle along toward the rear of the procession. Some educators conclude that both their students and society at large would be better served if a number of black schools closed their doors. Contrary to the proposal for disestablishment, many observers conclude that the black institutions ought to be preserved and strengthened. Student finances, educational preparation, and growing enrollments argue compellingly for preserving,

¹McGrath, Earl. The Predominantly Negro Colleges and Universities in Transition (New York: Bureau of Publications, Teachers College, Columbia University, 1965).

strengthening, and integrating existing black institutions and against closing them or allowing them to wither on the vine of academe. To keep these institutions in being and to enhance the quality of their programs will require large sums of money. Both the social necessity and humane considerations persuasively demonstrate that obtaining these greatly needed resources is a work to which foundations, government at the local, state, and federal levels, and individual philanthropists can, with deep satisfaction, dedicate their efforts. As far as disadvantaged blacks and other youth are concerned, the concept of excellence can be realized by taking students where they are socially, economically, and educationally, and developing their abilities to the fullest -- a task long familiar to the black schools of America.

To retain any validity today, the Hopkins image of higher education as a teacher on one end of a log and a student on the other must include books, journals, microforms, and a computer between them. If a library is to be of high quality, college administrators must understand and appreciate its role in accomplishing the objectives of higher education. Faculty members must also be familiar with its collection in their own subject areas, be active in helping to keep the collection current, and assure its effective use. Finally, the financial support of the library must be both adequate and free from frequent and violent fluctuations.

This essay reports on several major features of black academic libraries: collections, operating expenditures, staff, and salaries.

The quality of any college library is determined first by the extent and nature of its materials and human resources. When its holdings are insufficient, outdated, or inadequately housed, or, when its staff and services are unreliable, unimaginative, or ineffective, the library cannot actively accomplish its functions. The resources and services of black college libraries run the gamut from poor to excellent, but the curve is skewed toward the lower end. Their problems are those of most small college libraries, but they are more intense. The need for library resources and services is accentuated in black colleges by the lack of sufficiently trained personnel and the larger than usual normal proportion of poorly prepared students.

Eighty-five black, four-year, degree-conferring institutions were queried in connection with this study. Fifty-one questionnaires were returned. Information about other institutions which did not respond was gathered from other sources. The results were categorized in terms of type of support of the institutions. United Negro College Fund is a group of privately supported, accredited, four-year colleges which have banded together to carry on fund-raising jointly -- founded in the 1940's, it is the oldest educational "community fund" extant. The fall of 1968 was taken as the base period for this inventory of black academic libraries. Some institutions furnished information, and requested that it be used only in summary form. This confidence was respected.

Statistics, it seems safe to say, are used in surveys of collections more consistently than anything else. If a library says anything at all about its collection, it is almost sure to

mention its size. There are widely accepted standards for minimum sizes of college libraries, below which, in the judgment of professional organizations or accrediting associations, it is impossible to provide the variety of materials required for adequate service. Above the minimal sizes, standards usually specify a given number of additional volumes per capita. Comparison with like libraries is also permissible. Per capita calculations and comparisons are normally made by applying additional quantitative standards such as the number of periodicals currently received. These figures alone may be misleading, as quality is more important than quantity. Uniformity has not been achieved in methods of counting library holdings, and many libraries have discovered errors in the reporting of figures; however, size does tell something. There is normally a high correlation between the size of a library, its usefulness, and the quality of the institution it serves.

In the 51 institutions reporting their 1968 fall figures there were 92,911 students enrolled on a full-time basis. The enrollments ranged from a low of 520 to a high of 8,847. These institutions reported a total of 4,290,915 volumes for the end of the year; the smallest collection had 5,281 and the largest collection had 575,357 volumes. No collection in a black college approaches one million volumes. Eleven institutions (about one-fifth) exceed the 100,000 volume figure (see Table 1). During the year, 324,487 volumes were added, ranging from a low of 1,021 to a high of 43,893 volumes. The total number of bound periodicals reported was 235,212, ranging from 288 to

26,451 volumes (this is not a very reliable figure as many libraries did not keep a separate figure). Per capita figures are often used in surveying collections. There were 46.1 volumes per full-time student on the average in these black college libraries, with 2.5 periodicals per capita. The highest per capita holdings were 142.7 volumes and 13.3 was lowest; 14.4 bound periodicals per capita was the highest reported with a low 0.26.

Some comparative figures are available from the U. S. Office of Education. For the academic year 1967-68, 2,300 academic libraries reported holding 303,000,000 volumes at the end of the year and 43.3 volumes per student. Twenty-nine of the black libraries in the present study held this number -- although the average for the black schools exceeded the 43.3 volumes. During the academic year 22,000,000 volumes were added; less than a half-million were added to black college library collections.

Let us take a look at the privately-supported colleges. Thirty-four reported a total enrollment of 46,404 -- about half of all reported. These enrollments ranged from a low of 551 to a high of 8,847. About half of the 2,494,000 volumes in all the reporting libraries were held by these privately supported institutions. The largest collection of 575,357 volumes among the black colleges is included in this group. Over half of the number of volumes added to all collections were added to the libraries of private colleges. Less than one-third of the bound periodicals reported were in privately-supported college libraries (see Table 2). The average per capita holdings for privately-supported libraries was 53.7 volumes which exceeds national figures -- the range was from a low

Totals	46,404	2,494,404	107,770	95,441	53.7

of 13.8 to a high of 142.7 (twenty-one libraries met the national figure). Again the highest and lowest per capita holdings of bound periodicals were found in this group: the highest per capita holdings being 14.4 and the lowest 0.26.

Publicly-supported institutions present another picture as 46,507 students were enrolled in these colleges -- about half of all students enrolled in black institutions. Seventeen publicly supported institutions revealed larger enrollments than privately supported colleges. The enrollments ranged from a low of 944 to a high of 5,957, with only one college having less than 1,000 students. One-half of the volumes in black libraries were in these colleges with collections ranging in size from 43,346 to 261,944 volumes. Less than half of the total number of volumes added to black libraries were acquired by publicly-supported colleges (153,717 of the 324,487 total). The range of acquisitions was a low of 3,161 and a high of 17,403. Of the 235,212 bound periodicals held by all reporting libraries, 139,771 were held by publicly-supported institutions, ranging from a low of 1,970 to a high of 26,451. There was an average of 37.1 volumes per capita in this group with a range of 15.5 to 72.3 per capita with eight institutions exceeding the national figure. On a whole privately-supported colleges rated higher than those that are publicly supported (see Table 3).

Members of the United Negro College Fund might be considered the "elite" of black institutions -- or at least they are so considered. Thirty-four are considered in this study -- some have been added and one has resigned from the group since the study. All UCF Colleges did not answer the questionnaire, and some figures

Totals	46,507	1,796,511	153,717	139,771	37.1	3.05

were gathered from other sources (see Table 4). In the UNCF colleges 33,708 students were enrolled, about one-third of the total enrolled in black institutions. Enrollments ranged from 481 to 6,407. The total number of volumes held by the UNCF colleges is 1,734,767, or approximately three-sevenths of 4,290,915, the total holdings of all black college libraries (see Table 4). Over half of the total number of books added to the collections of all libraries included in the study were added to UNCF college libraries; 177,851 volumes out of a total of 324,487. Out of a total of 235,212 bound periodicals, 105,513 volumes were held by UNCF libraries. An average of 44 volumes per capita was held by these libraries against the national figure of 43 volumes per capita with a range of 11.5 to 142.7. UNCF libraries were doing better than publicly-supported libraries, and better than non-UNCF members.

Table 5 summarizes the statistical data reported on collections in the predominantly Negro college libraries.

The Association of College and Research Libraries published "minimum" standards for academic libraries in 1959. These standards are taken seriously by many college library administrators. These widely accepted standards give direction as to minimal size of an academic library, and libraries which fall below these standards, substantially, cannot provide the variety of materials required for adequate service. Above the minimal size, standards ordinarily specify a given number of additional volumes per capita. A minimum collection of 50,000 "carefully selected" volumes is suggested for a minimum enrollment of 600 students; the addition of 10,000 volumes is suggested for each additional unit of 200 students.

COLLECTIONS OF PREDOMINANTLY NEGRO ACADEMIC LIBRARIES

INSTITUTION (Summary, Fall, 1968)	Total Enrollment, Fall 1968	Number of Units in Collection			Units Per FTE Student	
		Volumes at End of Year	Volumes Added During Year	Periodicals Bound Vols.	Volumes	Periodicals
*PNC - 2 reports)	92,911	4,290,915	324,487	235,212	46.1	2.5
Privately (33 reports)	46,404	2,494,404	170,770	95,441	53.7	2.05
State (17 reports)	46,507	1,796,511	153,717	139,771	37.1	3.05
**UNCF (25 reports)	33,005	1,709,237	176,830	105,513	51.7	3.1

ENROLLMENT

All PNC 51 reported a total of 92,911 or an average of 1,821.7 students.
 State 17 reported a total of 46,507 or an average of 2,735.7 students.
 Private 33 reported a total of 46,404 or an average of 1,406.1 students.
 UNCF 25 reported a total of 33,005 or an average of 1,320.2 students.

BOOK COLLECTION

All PNC 51 reported a total of 4,290,915 or an average of 84,135.5 volumes.
 State 17 reported a total of 1,769,511 or an average of 105,677.1 volumes.
 Private 33 reported a total of 2,494,404 or an average of 75,730.4 volumes.
 UNCF 24 reported a total of 1,709,237 or an average of 71,218.2 volumes.

ADDITIONS TO COLLECTION

All PNC 51 reported a total of 324,487 or an average of 6,362.4 volumes.
 State 17 reported a total of 153,717 or an average of 9,042.1 volumes.
 Private 33 reported a total of 170,770 or an average of 5,174.8 volumes.
 UNCF 24 reported a total of 176,830 or an average of 7,367.8 volumes.

PERIODICAL COLLECTION

All PNC 35 reported a total of 235,212 or an average of 6,720.3 volumes.
 State 13 reported a total of 139,771 or an average of 10,751.5 volumes.
 Private 20 reported a total of 95,441 or an average of 8,772 volumes.
 UNCF 18 reported a total of 105,513 or an average of 5,864 volumes.

*Predominantly Negro Colleges

**United Negro College Fund

Table 6 shows a balance sheet for UNCF libraries. A figure has been computed for each library in light of the ALA standards, and a plus or minus symbol is used to indicate if the collection in each of these libraries reaches minimum standards. A figure has also been given to show the extent of the deficit. Of the 34 UNCF libraries under study 23 or approximately two-thirds, did not meet the minimum standard. One met the standard exactly, eight exceeded the standard, and two graduate institutions would not be evaluated by these standards. A word must be said about the undergraduate colleges in the Atlanta University Center whose separate collections all fall below minimum standards; however, the holdings in the Atlanta University library show a "plus" for these schools, which might not be justified.

There is a "deficit" of approximately 676,000 volumes to bring the 34 UNCF libraries up the minimum standard of size of collection. There is probably a greater "deficit" if the present collections were properly weeded, and only the "carefully selected" items were retained. What would it take to purchase these volumes? Library Journal of July, 1969 reports the average cost of a hard cover book in 1968 was \$8.47. It would take approximately 5.7 million dollars at 1968 average book prices to erase this deficit. A similar picture would probably present itself for the publicly-supported and the non-UNCF libraries.

Libraries have made real gains with respect to support during the past several years, along with hard-won recognition and general acceptance of the services they provide. A study of the finances of a library and of its services necessarily requires an evaluation practically every other factor that relates to its operation.

*Plans for Progress. Directory of Predominantly Negro Colleges and Universities, 1969.

#American Library Directory, 1968-69.

ALA MINIMUM STANDARDS: Minimum collection of 50,000 carefully selected volumes for a minimum enrollment of 600 students. Add 10,000 volumes for each additional unit of 200 students.

While it does not necessarily hold true that an effective library program is the result of adequate support, the two factors are, naturally, related.

While, as a general rule, a college library should receive a budget of no less than five per cent of the total operating budget of the college, the librarian should plan a budget on need. Many institutional budgets are so small that the library's five per cent is a pittance. Another method used in checking the adequacy of the library budget is the student formula; that is, an adequate library program requires an expenditure of between \$50 and \$80 per student.

The libraries' responses indicated that \$7,130,087 was spent for library expenditures; ranging from a high of \$871,873 to a low of \$36,317. About half of this figure, \$3,495,631, was paid in salaries which ranged from a low of \$17,222 to a high of \$411,559. Approximately one-tenth of total library expenditures, \$716,222 was for wages. Binding of books and periodicals amounted to \$157,715. Less than one-third of the total library expenditures, \$2,320,610, was spent for books. Only three libraries spent more than \$100,000 for books, and the range was from a low of \$6,494 to a high of \$325,087. Other library expenditures amounted to \$439,079 (see Table 7). Expenditures on a per capita basis revealed a range of \$36 to \$153. Keeping in mind the suggested range of \$50 to \$80 as an adequate per capita library expenditure, five libraries spent less than \$50 and 21 spent less than \$80. Twenty-six libraries exceeded the \$80 figure, three met this figure, and several more libraries doubled it. There should be little cause for jubilation, as many of these libraries are in the midst of programs of "catching up"

1 these indications of increased expenditures do not merit complacency (see Table 7).

The allocation of five per cent of the total educational budget for library purposes is being met by 26 libraries. It was impossible to compute this figure for seven libraries. The percentage of the general budgets spent for libraries ranged from a low of 1.5 to a high of 10.3. Here again, the five per cent figure allows little room for complacency.

How many staff members should a library have? What standards should a survey employ in evaluating personnel? The answer is simply as many as necessary to accomplish the objectives of the library. This answer seems clear enough, but it is far from easy to apply. Library service is open ended in character; better service leads to more use and this, in turn, requires still more staff members. Librarians have developed guidelines for division of staff between professional and non-professional positions. Some recommend that there should be two supportive staff members for every professional position. ALA standards require a minimum of three professional librarians in an academic library. There are other formulas based on student enrollment to be used to justify additional professionals. Eight libraries reported staffs of professionals of less than three. There were no one-man libraries. The number of professional staff members ranged from two to 27. The number of non-professional staff did not fare so well as the range was from one to 41. If the standard of two non-professionals for every professional was applied, the picture is rather bleak as 14 libraries had this ratio. The question arises as to why administrators are reluctant to hire sufficient supportive staff for their libraries. With the lack of sufficient supportive staff, many professional librarians are tied down to clerical duties which could

be performed more cheaply by non-professional assistants; thus releasing the greatly needed library expertise to assist students and faculty.

Hours of student help are difficult to evaluate, and many black libraries depend heavily upon this source of manpower. The responses indicated that the range was from 1,035 to 135,232 hours of student help for the year reported. It is realized that the genius of black higher education is represented by this "bootstrap" operation of self-help; however, it would be far more desirable to translate some of these expenditures for student wages into the employment of full-time supportive personnel.

Work weeks are becoming shorter, and a 37-hour work week is not uncommon. Two libraries reported a 35-hour work week, while most libraries still have the 40-hour week (see Table 8).

Salaries are not a matter of what should be paid for a given type of work but what the market provides. A brief survey was made in April, 1968 of the salaries reflected in the ads of the March, 1967, and March, 1968 issues of the ALA Bulletin, Library Journal, and Wilson Library Bulletin (three widely read library periodicals). The study revealed that the median salary range for vacancies generally requiring no experience in March, 1968 was \$7,000 to \$7,500; the lowest starting salary was \$5,400 and the highest was \$8,500 -- all of these salaries required a MSLS degree. The Library Journal of June 15, 1969 reported that the average salary for 1968 library school graduates was \$7,660 with a median of \$7,488 and a cluster at \$7,000-\$7,500 (a range of \$4,500 to \$16,300). Table 8 shows what these black schools were paying as beginning salaries to library school graduates (or holders of

MSLS degrees generally requiring no experience). In comparison with the survey of the three library periodicals, nine libraries were offering between \$7,000 and \$7,500 for these beginning positions and some offered less than \$5,400, the lowest figure, while none approached the high of \$8,500. The average salary offered library school graduates as reported in the Library Journal was surpassed by only three libraries in this study with salaries ranging from \$7,883 to \$8,054. The median salary of \$7,488 was met or exceeded in six instances. It would appear that the black libraries are not in a very competitive position for hiring library school graduates.

As experienced employees are often hired within the salary range rather than at the minimum step it was not possible to ascertain the real hiring rate in the survey of the three periodicals. Therefore, the minimum rate was used: the median salary range for vacancies generally requiring the MSLS degree plus experience, for March, 1968, was \$8,500 to \$8,999, with the lowest salary at \$6,200 and the highest at \$12,000. Associate or assistant librarians in black colleges numbered eight who received more than \$8,500. In fact, all eight exceeded the \$8,999 figure in the survey, and one exceeded the \$12,000 high of the survey. The remainder of the group fared pretty well, all receiving more than the low of \$6,200. Heads of major units (eight in number) received more than \$8,500 and two received less than \$6,200. Other professional librarians, except one, received less than \$8,500 with a range of \$5,000 to \$9,000 (see Table 9). Chief librarians in the black sample earned from \$6,500 to \$18,469. Clerical help averaged between \$3,000 and \$6,000. On the whole salaries in black college libraries were not competitive.

*Part-time

The black colleges are making a considerable effort by themselves to overcome the deficiencies of their libraries. As these colleges increasingly use a greater variety of teaching techniques other than textbooks and lectures, and as their faculty members increasingly attempt to keep up with advances in their fields, the black colleges will need even more extensive support to remedy their deficiencies. The present condition of library services in most of the black colleges can be summed up in the statement that the physical facilities are in general more adequate than the books, journals, films, records they contain, or the number of library staff. The situation is about even between the privately-and-publicly-supported institutions, with the UNCF libraries having a slight edge. Their collections and staff need extensive strengthening to rectify a history of insufficient support and to help lift instruction and learning out of ritual and routine.
